

INTERNATIONAL PHOTOACOUSTIC & PHOTOTHERMAL ASSOCIATION

(IPPA)

3 Scarborough Hts. Blvd.
Toronto, ON, M1M 2V3, CANADA

June 7, 2024

Dear Dr. Raetz:

On behalf of the International Photoacoustic and Photothermal Association, I am very pleased and honored to inform you that you have been awarded the 2024 Junior Prize of the IPPA. The Prize was established to recognize outstanding young researchers who, at an earlier stage in their career, have made significant contributions to photoacoustic, photothermal and related techniques and applications that are expected to have strong impact on diverse scientific and engineering communities. It consists of US \$1,000 and a certificate with the appropriate citation. The citation that will appear on the certificate reads as follows:

for original contributions to non-destructive testing through laser ultrasonics, including insights into non-axisymmetric photoacoustic generation in low-absorbing materials and evaluation of adhesive bonding and fatigued materials using zero-group velocity Lamb modes; for significant advancements in refining the experimental setup, innovating signal processing techniques, and supporting theoretical analyses of three-dimensional imaging of complex transparent materials using time-domain Brillouin scattering, facilitating remarkable applications of the technique, particularly in assessing and tracking the evolution of complex materials, notably under high pressure conditions in diamond anvil cells; and for dedicated involvement in various activities and services benefiting the photoacoustic and photothermal communities.

The Junior Prize of the IPPA will be presented at the ICPPP22 meeting in Coimbra, Portugal, July 8 - 12, at a special Ceremonial Plenary Session.

With my warmest congratulations!

Andreas Mandelis

President, CEO and Board Chair, IPPA
